FEATURES

The Astrid Elite Telescopic series is stylish and compact - ideal for a wide range of applications, especially retail, museum and gallery environments.

A unique modular system with track, surface, pendant and wall mount options, the sleek lines of the fittings are achieved through integration in the 'engine' of the driver and so no external components are visible.

The Telescopic series is designed to give higher lumen output and wide range adaptability, ideal for highlighting specific subjects without the need for accessories and with an adjustable beam to meet the need of moveable displays of different shapes, sizes and importance.

Large profile beam angles - 25° compared to 60°
